Contents

Vertical Distribution of the Standing Crop of Plankton and Micronekton at Three Stations in the Northeast Atlantic

M. V. ANGEL
A. de C. BAKER 1

Vertical Distribution of Chaetognatha in the Central Northwest Atlantic Near Bermuda

A. C. PIERROT-BULTS 31

On the Relationship Between Interannual Baroclinic Waves and Fish Populations in the Northeast Pacific

LAWRENCE A. MYSAK
WILLIAM W. HSIEH
TIMOTHY R. PARSONS 63

Preface 105

Quantitative Estimates of Euphausiid Biomass Determined by High-frequency Acoustics

RICHARD E. PIEPER 133

Assessment of Euphausiids with Five Nets and a 120-kHz Echosounder in Fjords of Northern Norway

W. G. PEARCY
C. F. GREENLAW
T. POMMERANZ 151

Micronekton Sampling using a New Multiple-Net Sampler, the BIONESS, In Conjunction with a 120 kHz Sounder

D. D. SAMEOTO 179

Abundance Assessment of Micronektonic Sergestid Shrimp in the Ocean

M. OMORI 199

Net Sampling and Abundance Assessment of Euphausiids

TAKAHISA NEMOTO 211

Multiple-Frequency Acoustical Estimation

CHARLES F. GREENLAW
RICHARD K. JOHNSON 227

Assessment of Population Abundance by Hydroacoustics

RICHARD E. THORNE 253

Quantitative Assessment of Micronektonic Fishes by Nonclosing Gear (A Review)

NIKITA I. KASHKIN
NIKOLAY V. PARIN 263

Quantitative Assessment of the Vertical Distribution of Micronektonic Fishes with Opening/Closing Midwater Trawls

W. G. PEARCY 289

Comparison of Abundance Estimates of Small Fishes by Three Towed Nets and Preliminary Results of the Use of Small Purse Seines as Sampling Devices

THOMAS A. CLARKE 311

Assessment of the Abundance of Flying Fishes by Visual Observation

NIKOLAY V. PARIN 341

Quantitative Sampling of Oceanic Cephalopods by Nets: Problems and Recommendations

JOHN H. WORMUTH
CLYDE F. ROPER 357

A Review of the Methods and Problems of Quantitative Assessment of *Loligo opalescens*

GREGOR M. CAILLIET
DOUGLAD L. VAUGHAN 379

Stock Assessment by Larval Surveys of the Winter Population of *Todarodes pacificus* Steenstrup (Cephalopda: Ommastrephidae), with a Review of Early Works

TAKASHI OKUTANI
TAISUKE WATANABE 401

Quantitative Assessment of Oceanic Squid by Means of Jigging Surveys

M. MURATA 433

INSTRUCTIONS FOR AUTHORS

BIOLOGICAL OCEANOGRAPHY aims to advance understanding of the ocean as a biological system, and publishes scientific papers and speculative notes from any branch of biology that contributes to this aim. The major thrust of the journal is ecological, and particularly appropriate subjects include studies of primary and secondary production, biogeography, natural history, community structure and dynamics, physiology, evolution and systematics, and the relationship of the oceanic biota to the physical milieu.

Manuscripts should be submitted to the Editor-in-Chief, Richard L. Haedrich, Department of Biology, Memorial University of Newfoundland, St. John's, Newfoundland, Canada A1B 3X9. Manuscripts are accepted with the understanding that their content is unpublished and is not being submitted for publication elsewhere. Translations of papers previously published in languages other than English can be considered, but this information should be provided by the author at the time of submission.

FORM. Submit an original and two complete copies of the manuscript in English on good quality paper about 20 x 28 cm in size. All typing should be double-spaced with 3-cm margins around the page. Avoid breaking words at the end of lines. Number pages consecutively throughout. Use separate pages for title, abstract, figure legends, and for each table.

TITLE PAGE. On the title page include the name(s) of author(s), professional affiliation, and the complete address of the author to whom correspondence and proofs should be addressed. Short titles are preferred. It is to the author's benefit to include key words that can be used for indexing and information retrieval purposes.

ABSTRACT. An informative abstract, not a summary of contents, of less than 250 words should follow the title page. Do not include references.

STYLE. In general, papers should be organized with an Introduction, Methods, Results, Discussion, Acknowledgments, and References, in that order. Be guided by papers in the journal and by the Council of Biology Editors (CBE) Style Manual. Webster's International Unabridged Dictionary is the authority for the spelling and hyphenation of words. System International (SI) or modern metric units must be used.

REFERENCES. Citations in the text are by author(s) and date. Full citations in the References section should conform to the following style:

Fleminger, A. and K. Hulsemann, 1973. Relationship of Indian Ocean epiplanktonic calanoids to the World Oceans. In: B. Zeitzschel (ed.) The Biology of the Indian Ocean. Springer Verlag, Berlin: 339-348.

Menzies, R. J., R. Y. George, and G. T. Rowe, 1973. Abyssal Environment and Ecology of the World Oceans. John Wiley & Sons, New York. 460 pp.

Thiel, Hj., 1975. The size structure of the deep-sea benthos. Internationale Revue der gesamten Hydrobiologie 60(5): 575-606.

FIGURES. Each photograph or drawing must be on a separate sheet in a form suitable for good quality reproduction. Lettering must withstand reduction of the figure to page width (11 cm) or half-width (5.5 cm). Either black-ink line drawings or glossy photographs are acceptable. Top of the figure should be indicated. On the back or in the margin of each figure indicate the figure number (according to the sequence of its appearance in the text), name of author, and the journal. Figure legends should be typed double-spaced on a separate sheet. In the margin of the text, indicate with pencil the approximate location of each figure.

TABLES. All tables must be discussed or mentioned in the text, numbered with arabic numbers in sequence, and typed on separate sheets. Do not include tables within the text, but indicate with pencil in the text margin the approximate location of each. Each table should have a brief descriptive title. Explanatory material should appear in footnotes, keyed to the table with lower-case letters. Define all data in column heads, including appropriate units or descriptions. Every table should be fully understandable without reference to the text, and should replace the text rather than duplicate it.

PROOFS. All proofs must be corrected and returned to the publisher within 48 hours of receipt. Only corrections of typographical errors are permitted. The author will be charged for additional alterations to text at the proof stage.

COPYRIGHT. Under the new copyright law, the transfer of copyright from author to publisher must now be explicitly stated to enable the publisher to assure maximum dissemination of the author's work. Copies of the form for use with this journal can be obtained from the Editor.

REPRINTS. A total of 25 free reprints will be provided to the principal author indicated on the title page. Additional reprints may be ordered when page proofs are approved at charges shown in the reprint price scale that will be sent to the author with the proofs. There are no page charges. Reprints are not available after publication of the issue.
